SUMMARY

Technical Gameplay Designer and XR Developer with experience building gameplay systems, VR simulations, AI behaviors, and cross-platform interactive experiences using Unity, Unreal Engine, and C#. Skilled in gameplay architecture, XR interaction design, performance optimization, and rapid prototyping across PC, mobile, WebGL, and Meta Quest platforms. Experienced in translating design concepts into polished, performant gameplay through iterative development and playtesting.

EXPERIENCE

8 Chili Inc

Unity Developer Intern

Bangalore, India

May 2026 – Present

- Developed and integrated XR interaction systems for industrial-grade VR simulation applications using Unity, C#, OpenXR, and XR Interaction Toolkit.
- Implemented interactive simulation features, UI workflows, and physics-based interactions to support immersive training experiences.
- Collaborated across development, design, and testing teams to validate functionality, troubleshoot issues, and improve simulation stability.
- Performed VR testing, debugging, and optimization across Meta Quest devices, contributing to reliable real-time performance and user experience.

Karma Play Academy

Unreal Engine Profiling & Programming Engineer Intern

Remote

Dec 2025 – May 2026

- Utilized Unreal Engine profiling and debugging tools to identify performance bottlenecks in gameplay and physics-driven systems.
- Investigated Chaos Physics workflows, rigid body simulation, and collision systems through implementation and performance testing.
- Evaluated frame-time costs and engine-level systems to support optimization and runtime stability improvements.
- Applied profiling methodologies and debugging workflows to strengthen performance-oriented development practices in Unreal Engine.

Deep Learning Titans

Game Development Intern

Remote

Apr 2025 – Jul 2025

- Contributed to project AIKO, implementing two 3D fetch-based mini-games using mathematical interpolation for motion paths.
- Applied optimization techniques (complexity reduction, memory profiling) to improve runtime efficiency of 3D assets and mechanics.
- Collaborated with developers to integrate AI-driven behaviors using probabilistic decision trees and vector math for pathing.

PROJECTS

Dragon Duel | Combat Vertical Slice, Unity 6 [Play]

2026

- Developed a cross-platform combat vertical slice in 4 days, delivering builds for Windows, Android, and WebGL.
- Engineered combat system with 3 player and 3 enemy abilities, each driven by animation events and timing windows.
- Authored NavMesh-based enemy AI using distance and damage-weighted decision logic for attack selection.
- Architected modular gameplay systems separating movement, combat logic, animation handling, and platform-specific input for faster iteration and tuning.
- Optimized mobile build to maintain stable 60 FPS, resolving performance drops from 30 FPS during early testing.

The Biscuit Makes You Risk It | Action Shooter, Unreal Engine 5 [Play]

2025

- Developed a modular curse system with 5 distinct effects, dynamically applied per run to introduce gameplay variation.
- Programmed core gameplay systems including enemy AI, wave progression, and weapon mechanics within a 48-hour game jam.
- Conducted 20+ playtests, iterating on enemy scaling and curse intensity to improve difficulty balance and engagement.
- Resolved critical gameplay bugs and improved onboarding through clearer interaction cues and audio-visual feedback.

VR Pharmacy Game | VR Simulation, Unity 6 (XR Toolkit)

2026

- Directed end-to-end development of a VR diagnosis and treatment simulation, independently building gameplay, interaction, and progression systems.
- Engineered a patient lifecycle system using NavMesh agents and implemented physics-based medicine handling alongside timing-based CPR validation mechanics.
- Built an economy and progression system with diagnosis-based rewards, penalties, and an integrated in-game shop.
- Authored 3 world-space UI systems and integrated XR Interaction Toolkit to support immersive player interactions and feedback.
- Maintained stable 72 FPS through low-poly asset workflows, coroutine-based optimization, and 20+ playtest-driven iterations.

SKILLS

Languages: C++, C#, Java, Python

Engines & XR: Unreal Engine 5, Unity 6 (URP), OpenXR, XR Interaction Toolkit, Meta Quest Development

Unreal: Blueprints, Animation Blueprints, AI Behavior Systems, State Machines, Gameplay Framework, C++ Integration

Unity: C#, Combat Systems, NavMesh AI, Animation Events, Shader Graph, Cross-platform Input (PC & Mobile)

Gameplay & XR: Combat Systems, Enemy AI, Gameplay Loops, XR Interaction Design, Physics-Based Interactions, Performance Optimization, Cross-Platform Deployment

Tools: Blender (model integration & basic animation), Git/GitHub

EDUCATION

VIT Bhopal University	Bhopal, MP
B.Tech CSE with Gaming Technology	2022 – 2026
* Relevant Coursework: Computer Graphics, Game Development, OOP, DSA, Computer Vision	

CERTIFICATIONS

Unity and C# Basics – Coursera	Issued Dec 20, 2023
---------------------------------------	---------------------
